

Experiment No 3

The screenshot shows the AWS Management Console for the 'ap-southeast-2' region. The main heading is 'Amazon Elastic Compute Cloud (EC2)' with the subtext 'Create, manage, and monitor virtual servers in the cloud.' Below this, a paragraph describes EC2 as a platform with over 600 instance types. To the right, there are buttons for 'Launch a virtual server' (with a 'Launch instance' button) and 'View dashboard'. Further down, there are sections for 'Additional actions' (with links to 'View running instances' and 'Migrate a server') and 'Pricing (US)' (with a link to 'EC2 pricing options'). A 'Benefits and features' section highlights that EC2 offers ultimate scalability and control, being fully resizable and supporting various operating systems like Linux, Windows, and macOS. The left sidebar contains navigation links for EC2, Dashboard, AWS Global View, Events, Instances, Instance Types, Launch Templates, Spot Requests, Savings Plans, Reserved Instances, Dedicated Hosts, Capacity Reservations, Capacity Manager, Images, AMIs, AMI Catalog, and Elastic Block Store. The bottom of the console shows a status bar with '28°C Mostly cloudy' and system icons.

The screenshot shows the 'Instances' page in the AWS Management Console. The breadcrumb navigation is 'EC2 > Instances'. The page has a filter bar with 'Instance state = running' selected. Below the filter bar, a table header is visible with columns: Name, Instance ID, Instance state, Instance type, Status check, Availability Zone, and Public IPv4 DNS. The table content shows 'No matching instances found'. Below the table, there are three panels: 'Instance alarm states' (showing 'In alarm' as 'None'), 'Service health' (showing 'EC2 service status' as 'Operating normally'), and 'Health events affecting EC2 instances' (showing 'Open events' and 'Upcoming events' as 'None'). The left sidebar is the same as in the first screenshot. The bottom status bar shows '28°C Mostly cloudy' and system icons.
